

ALED Amber area lights

Ecologically responsible lighting.

Turtle-friendly lighting.

Light sources can disorient nesting sea turtles and their hatchlings, leading them away from the water. They can also interrupt biological clocks and instincts to sleep and feed. ALED amber area lights minimize the risk of disruption to wildlife.

Meets Certified Wildlife Lighting Standards

Low Output

Field-adjustable wattage lets you keep lumen output at the bare minimum for what is needed.

NON-SHIELDED

SHIELDED

Fully cutoff, fully shielded

ALEDs are full cutoffs* that minimize light pollution and keep light where it's needed. For even more effective protection, the ALED shield accessory can also block light on the beachside.

No Distractions

ALED amber emits long-wavelength light (585-595nm) that is less distracting to wildlife. RAB uses true amber LEDs, unlike phosphor-converted LEDs which still produce blue wavelength light that can be confusing to sea turtles that rely on moonlight to guide them.
