Hub

Lightcloud for small spaces, budgets and needs.

The functionality of a Gateway in one little Hub.

BI-LEVEL DIMMING

No Gateway required.

Not every site requires the large-scale capacity of a Lightcloud Gateway. When you want the control and functionality that a Gateway provides but all on a smaller scale, the Hub gets the job done for you—with everything you need, and nothing that you don't.
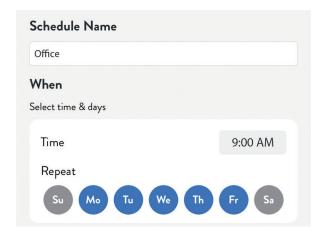

Easy and affordable for you to set up.

We've taken some of the best Lightcloud features—ease of use, wireless control, simple installation, and security—and reimagined them for smaller applications. Because not all sites require large, complex systems, the Hub was designed to get you up, running, and "in control" with minimal investment.

The Hub integrates lighting management into a Dimmer, so there's no extra hardware to install. Simply download the Lightcloud App and easily configure the Hub directly from your phone. That's it! Instant, local control right out of the box.

WIRELESS

SECURITY

INSTALLATION

Set schedules.

Save energy—and money—and optimize your environment with schedules. Simply tell Lightcloud when and how to illuminate a space, and it will automatically adjust your schedule based on sunrise/sunset. Last-minute change? Just tweak schedules right from your smartphone.

Occupancy & vacancy.

Lightcloud sensors help you light the spaces you're in, and save energy in the spaces you're not. They can be scheduled/disabled for parts of the day, and if you need to change settings you can do it all right from your smartphone...no ladder required!
