

A modern look at an affordable price.
Slim surface mounts with field adjustability.

Field adjustability.

All models come with five selectable color temperatures 2700/300/3500/4000/5000k to maximize flexibility on site.

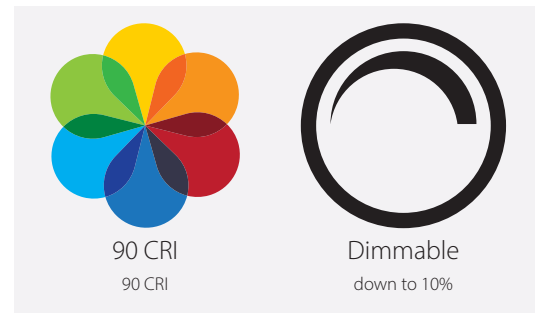

Contemporary design on a budget.

The surface linear family has an ultra-low-profile design that adds a modern, unobtrusive look to any space. Available in a rectangular form and in 3 lengths, they're versatile enough for both commercial and residential installations that need simple, affordable lighting.

Easy on the eyes.

The surface linear uses edge-lit technology to disperse light through a diffusion lens which creates a smooth, uniform distribution and reduces glare. All models are dimmable with TRIAC systems and 90 CRI for more accurate color rendering.
